

Mohammed Altoum

IT Manager at Hilal Al-Sharq. Infrastructure, Odoo ERP, Microsoft 365 and security.

Baghdad, Iraq · mabdulla.alt@gmail.com · linkedin.com/in/mohammed-abdallah28 · github.com/moax342 · English · Arabic

PROFILE

I'm an IT professional in Baghdad, and the part of the job I enjoy most is helping people feel confident with technology: fixing the problem, explaining it in plain language, or showing them a better way to work.

My route here was unusual and I think it's the reason the work holds up: electronic engineering, then telecom field work, then five years of fintech and back-office operations at MTN Sudan, then enterprise IT. I learned what a business actually needs from a system before I ever had to build one.

Today I run an entire IT function, and I write software when off-the-shelf tools fall short. I'd rather leave behind a documented system than an indispensable person.

EXPERIENCE

IT Manager
May 2025 – Present

Hilal Al-Sharq Co. · Baghdad, Iraq · On-site

- Own the full IT function: infrastructure, networks, servers, virtualisation and enterprise applications.
- Lead the Odoo ERP rollout across the branch network and build the mobile apps that extend it into the field.
- Administer Microsoft 365 and Active Directory, and set the endpoint security and access-control policy.
- Train staff and document infrastructure so knowledge stays with the company rather than any one person.

System Administrator
Jan 2025 – Sep 2025

Hilal Al-Sharq Co. · Iraq · On-site

- Ran the virtualisation estate on VMware ESXi and Proxmox, covering provisioning, backup and recovery.
- Administered servers, accounts and network services, keeping the business running day to day.
- Deployed a FreePBX VoIP server on the virtual estate, with VLAN and DHCP isolation for voice traffic.

IT Support Specialist
Sep 2024 – Jan 2025

Hilal Al-Sharq Co. · Baghdad, Iraq

- Delivered end-user support across hardware, software and networking, and set up network infrastructure.
- Promoted twice inside twelve months, from support to system administration to managing the department.

IT Support Specialist
Jul 2024 – Sep 2024

Anhar-Alhayat (KDD Iraq) · Baghdad, Iraq

- Acted as Odoo system administrator, managing users and access.
- Monitored the organisation's networks for performance and security, and implemented protective controls.
- Managed IT hardware and oversaw software installation, updates and licence compliance.
- Documented IT infrastructure and processes, and produced system performance reports.

Acting Back Office Supervisor
May 2022 – Feb 2024

MTN Sudan · Khartoum, Sudan · Contract

- Chaired performance analytics that delivered a 20% improvement in operational efficiency.
- Rebalanced workload and coached the team, lifting workflow balance by 25% and team performance by 30%.
- Delivered 98% customer satisfaction across all subscribers and cut churn by 15% through root-cause analysis.
- Identified and escalated fraudulent activity, contributing to a 15% reduction in incidents.
- Maintained 95% on-time SLA resolution and 100% policy compliance on customer credit restitution.
- Resolved 90% of complex cases on first interaction and ran training that raised team expertise by 20%.

Back Office Coordinator
Jul 2018 – May 2023

MTN Sudan · Khartoum, Sudan

- Closed 95% of MTN Fintech service issues within 24 hours, escalating early to avoid disruption.
- Processed 100% of customer requests accurately, cutting processing errors by 25%.
- Reconciled physical scratch cards against recharge reports, reducing discrepancies by 30%.
- Delivered 98% customer satisfaction on high-value and key accounts.
- Improved complaint escalation rates by 20% and processed credit-reversal transactions in line with policy.

Technical Engineer

Mar 2018 – Jun 2018

Vision Valley · Khartoum, Sudan

- Installed and configured switches, routers, modems and cabling for major telecom carriers.
- Monitored network performance, implemented optimisation measures and maintained network security.

Customer Service Representative

Oct 2017 – Mar 2018

MTN Sudan · Khartoum, Sudan

- Managed 500+ customer accounts with 99% accuracy and resolved 95% of requests within 24 hours.
- Resolved 80% of basic technical questions on the first call, escalating the rest appropriately.
- Contributed to a 15% rise in sales through upselling, and achieved a 95% customer approval rating.

Telecommunications Engineer

May 2017 – Jun 2017

Telecom & Post Regulatory Authority · Sudan

- Assisted with field site measurements for several telecom operators.
- Led and scheduled a training programme, coordinating between trainees and instructors.

SKILLS

Business systems: Odoo ERP, Odoo Van Sales, Microsoft 365, Active Directory, Data migration, Licence compliance, IT documentation, Help Desk / ITSM

Security: Kaspersky Endpoint, Burp Suite, Metasploit, OpenVAS, Network security, Hydra / Hashcat, SQLi · XSS · IDOR

Infrastructure: Windows Server, VMware ESXi · Proxmox, FreePBX, Backup & recovery, Linux administration, VLAN / DHCP, Network monitoring

Development & leadership: Flutter · Dart, Python, SQLite · Firebase · Supabase, Team leadership, Riverpod / BLoC, Staff training, Performance analytics

SELECTED PROJECTS

Odoo ERP rollout across the branch network ERP · Digital transformation

Moved Hilal Al-Sharq onto Odoo: migrated the legacy data, trained office staff and field sales reps on the Van Sales app, and rolled out branch by branch across Karbala, Al-Amarah and Basra. The hard part was never the software. It was change resistance, training gaps and messy legacy data.

Internal tools that cut data entry by 70% Automation · Internal tools

Designed and launched two internal tools that cut repetitive support requests and sped up onboarding for new and rotating staff. Daily data-entry time in the affected departments dropped by roughly 70%, and the institutional knowledge now lives inside the tools instead of in one person's head.

FreePBX VoIP deployment Infrastructure · Voice

Stood up a FreePBX voice server for internal communications on a virtualised host: configured SIP extensions and handsets, isolated voice traffic behind its own VLAN and DHCP scope, then tested call routing, voicemail and IVR before cutting the company over.

Hands-on offensive security practice Security · Practice

Active on TryHackMe, working CTF challenges in XSS, cryptography, IDOR and session hijacking. It isn't my job title. It keeps the defensive side of my work honest, because you secure infrastructure better once you have spent time attacking it.

Van Sales EC Mobile · Field sales

Field-sales app for van sellers, running against Odoo. Keeps the Odoo session token in the Android Keystore, follows routes with background GPS breadcrumbs, prints Arabic receipts to Bluetooth thermal printers, and updates itself over the air with SHA-256 verified builds.

Sakeena · سَكينة Mobile · Bilingual

A bilingual Islamic companion: the offline Uthmani Quran with tafsir, local prayer-time calculation, a sensor-driven Qibla compass, background recitation audio with lockscreen controls, and a Hifdh mode that listens as you recite using on-device speech recognition.

Labs Gym Mobile · Offline-first

An offline-first fitness app: a Drift/SQLite training log with charted progress, streamed exercise demonstrations, barcode nutrition scanning and opt-in local reminders. Fonts are bundled so the app never reaches for the network to render.

Timeoff Mobile · HR / Odoo

A leave-management client for Odoo. Employees request time off and managers approve it. Built on BLoC with dependency injection and an auth-guarded router, and fully bilingual with a proper right-to-left layout.

Promoter Tracker Mobile · Field merchandising

A field merchandising system: promoters check in on a live map, capture shelf photography and log visits into local SQLite while offline, syncing everything up to Supabase once a connection comes back.

DVML Secure Device Mobile · Device security
A password-locked Android launcher that keeps a managed device inside an approved set of apps. The admin passphrase is never stored, only its hash, and the policy cache survives restarts.

EDUCATION

Bachelor of Science, Electronic Engineering
Sudan University of Science and Technology · Faculty of Engineering, Computer & Network Department · Khartoum, Sudan

Diploma, Electronic Engineering (Telecommunications)
Telecommunication Department · Khartoum, Sudan
